EXPERIENCE

Freelance — Senior Full-Stack Application Developer

FEBRUARY 2025 - CURRENT

Over the last year, I have focused on freelance product development, building and refining software concepts across operations platforms and interactive projects. This has included **FieldOps Hub**, a field service management platform focused on scheduling, dispatching, and operational workflows, as well as **PulseOps**, an operations-focused concept centered on improving visibility, coordination, and day-to-day workflow management. In parallel, I have also been developing game and interactive software projects, expanding my experience in gameplay systems, technical experimentation, and iterative feature development while continuing to strengthen my skills across both web and interactive software.

MDG Solutions — Senior Full-Stack Web Developer

MAY 2019 - FEBRUARY 2025

At MDG, I worked on large, multi-location healthcare websites, helping maintain and improve systems used by thousands of daily visitors. My role focused on supporting existing Laravel and WordPress applications, improving performance and reliability, and collaborating with designers and project managers to deliver consistent client updates. I was often involved in diagnosing production issues, and improving deployment workflows.

Vision Financial Marketing — Senior Developer

MARCH 2017 - JULY 2018

I worked on a highly customized CRM platform for financial clients, contributing to backend services, data imports, and front-end improvements. Much of my work involved improving performance, handling large datasets, and ensuring that systems were reliable for daily client use. I collaborated closely with internal teams to deliver changes incrementally without disrupting existing workflows.

Bright Mountain Media — Director of Programming / IT

AUGUST 2013 - FEBRUARY 2017

In this role, I oversaw development and IT operations for a network of high-traffic media sites serving military and first responder communities. I

SKILLS

Web Development: HTML, CSS, JavaScript, PHP

Frameworks & Platforms:
Laravel, Vue.js, WordPress

Databases & Infrastructure:
MySQL, Redis,
LAMP/LEMP, AWS

Other: Git, REST APIs, Agile workflows

EDUCATION

Full Sail University — Bachelors

JANUARY 2026 - April 2029

Currently pursuing a Bachelor of Science degree in Game Development (in progress), with a focus on programming fundamentals, systems thinking, and interactive software design.

University of Phoenix — Bachelors

AUGUST 2008 - JANUARY 2010

Completed coursework focused on professional communication, organizational behavior, and business fundamentals.

worked hands-on in PHP and WordPress while also coordinating day-to-day priorities for technical teams. The focus was always on keeping systems stable, responding quickly to issues, and ensuring the platforms could scale with audience growth.

Host Concepts — Chief Technology Officer

JULY 2012 - AUGUST 2013

As CTO of a hospitality technology startup, I handled application development, infrastructure, and ongoing technical support. I worked directly with stakeholders to translate operational needs into simple, reliable tools while maintaining stable production systems. This role provided early experience balancing technical decisions with real-world business constraints.

PROJECTS

FieldOps Hub — (Not Launched Yet) [GitHub Repo](#)

FieldOps Hub is a Laravel + Vue 3 SaaS platform for small field-service businesses (HVAC, plumbing, electrical, etc.) to manage customers, schedule jobs, dispatch technicians, capture work on-site, and get paid—while tracking live technician locations on a map.

HMY Website — (Launched in January 2025) www.hmy.com

Built a custom Laravel-based content management system tailored specifically to HMY's internal workflows, replacing a more rigid off-the-shelf solution. Developed a completely new front-end to support improved performance, usability, and long-term maintainability. The project required close collaboration with stakeholders, careful migration planning, and a strong focus on reliability for a high-visibility production site.

Custom Multi-Location Healthcare Platform — (Launched in August 2023) www.towncaresdental.com | www.mainstreetsmiles.com

Contributed to the development of a custom multi-location healthcare platform supporting numerous dental practices under a shared system. The work involved building and maintaining Laravel-based backend functionality, integrating location-specific content and workflows, and ensuring the platform could scale while remaining stable for daily use. This project required close coordination with designers and project managers to support consistent branding, performance, and reliability across multiple practice websites.

Personal Website & Ongoing Projects — (October 2025) michaelstoffer.com

Designed, built, and continue to maintain my personal website as a

long-term, evolving project. The site serves as a central place for professional information, projects, and experimentation, and emphasizes clean structure, performance, and maintainability over time. This project reflects my preference for steady iteration, thoughtful design, and keeping systems simple and reliable as they grow.

Salon Trace — (June 2026) salontrace.com

The Salon Trace project was a complete redesign and modernization of the salon's website, focused on creating a polished digital experience that better reflects the quality of the brand and its services. The project included custom website design and development, improved service presentation, streamlined appointment and contact paths, AI-powered tools, hosting and infrastructure improvements, and preparation for Instagram integration. The goal was to give Salon Trace a modern, professional online presence that builds trust, showcases its services, and makes it easier for potential clients to connect with the salon.

The Oracle's Trial — (August 2026) [Portfolio Site](#)

The Oracle's Trial is a Greek mythology-inspired C++ text adventure where players explore a mysterious temple, make meaningful choices, collect items, develop character traits, and solve puzzles that influence the story and later interactions.
